

Missouri Department of
SOCIAL SERVICES

CyberAccessSM

The CyberAccessSM tool is a web-based, HIPAA-compliant portal that will enable MO HealthNet providers or their staff to:

- Download MO HealthNet paid claim data submitted for a participant by any provider over the past 3 years (drug claims, diagnosis codes, CPT codes, etc.)
- Identify clinical issues that affect the participant's care and receive best practices information.
- Prospectively examine how specific Preferred Drug List (PDL) and Clinical Edit criteria would affect a prescription for an individual participant and determine if a prescription meets the program's requirements for payment.
- Electronically request a Drug Prior Authorization (PA) or Clinical Edit override.
- Electronically request a pre-certification for certain medical procedures or Durable Medical Equipment (DME).
- Identify approved or denied Drug Prior Authorizations, Clinical Edit overrides, or Medical Pre-certifications previously issued for a participant.
- Transmit a prescription electronically to the participant's pharmacy of choice via a switch vendor or fax.
- View laboratory data and clinical trait data.
- Direct Care Pro Point of Service Medication Therapy Management (MTM) opportunities for pharmacists.
