DO I GET THE COVID-19 VACCINE IF I'M PREGNANT?

COVID-19 vaccination is recommended for all people aged 12 years and older, including people who are pregnant, lactating, trying to get pregnant or might get pregnant.

As of now, there's no evidence that the COVID-19 vaccine can affect fertility in women or men.

Make your decision:

Pregnant people have a higher risk of severe illness or death from COVID-19

compared with pregnant people without COVID-19. Pregnant people with COVID-19 are more likely to be admitted to the hospital or the intensive care unit (ICU).

So far, research has shown that the mRNA vaccines are safe and effective in pregnant people.

Still have questions?

It's a good idea to talk to your health care provider to help you make the best decision for you.

Here's what you need to know about the COVID-19 vaccine:

Some vaccines are given in two doses.

If you get the kind that's given in two doses, it's important to get the second dose a few weeks after the first one.

Side effects:

Some people have side effects that might last a day or two after getting a vaccine. These are normal signs that your body's building protection. In clinical trials of the COVID-19 vaccine, side effects included:

The CDC asks people who get the vaccine to enroll in the V-safe program. This mobile app will help you report side effects that you may experience after getting vaccinated.
